PREFACE

The frequency index of words tabulated in this publication grew out of studies being done by the Institute of Educational Research on the evaluation and improvement of training in functional military literacy. The purpose of this word list was to provide a factual basis for the preparation of materials based upon the vocabulary requirements of enlisted men in the Navy.

During and subsequent to World War II many men who were deficient in basic literacy skills were inducted into the Armed Forces. Before these men could be used by the Navy, they had to be taught the minimal literacy skills. The Navy word list should help to make the most of the limited time available for literacy training by enabling instructors to focus attention on the essentials. Thus, an illiterate who mastered the 503 words most frequently used would know about 64 per cent of all the words he would likely encounter in his Navy reading materials.

In the past, the Armed Forces have informally tabulated and used word lists in a limited manner. The present Navy word list, however, is the only one to be published that presents data on the relative frequency of use of words in military reading materials. Comparison of the Navy word list with other lists dramatically indicates the specialized nature of the Navy's vocabulary and the need for the Navy word list.

Although the Navy word list can be used most directly in the preparation of instructional materials for the literacy training program, it has a wider range of usefulness. It has been emphatically shown, for example, that even experienced writers and teachers will use too many rare words and exclude too many common words when relying solely on their experience and common sense. The Navy word list can be useful to all writers of Navy reading materials for enlisted personnel.

INTRODUCTION

Manpower demands of World War II were so extensive that the United States' Armed Forces were compelled to utilize marginal (illiterate) personnel, who under normal recruiting conditions would have been rejected from service. During World War II over 400,000 such illiterates, that is, illiterate at time of induction, served in the Armed Forces (8). A similar condition has obtained in the present state of military mobilization.

Before these men can be profitably integrated into the military, they must be taught the fundamental literacy skills. This, in turn, requires that teaching materials—readers, workbooks, and the like—be prepared. These materials must be adapted to the level, needs, and interests of adults. In addition they must teach the vocabulary required for adequate functioning in the military.

Purpose. The purpose of the present volume is to present a scientific basis for preparation of such teaching materials, materials based upon the vocabulary requirements of enlisted men in the Navy. It should also aid in the preparation of other written communications, in the preparation of reading ability tests, and in reading instruction itself.

This is not a new idea. "... the principle that before turning to comparatively rare words attention should be given to words of more frequent occurrence, is so natural that it must have been observed from the very first of language teaching" (1, p. 26). Further, the Navy (and other

branches of service) used the same technique during World War II. For example, Navy Life was "constructed as a basic vocabulary derived: first, from words shown by research to be an essential minimum for literacy; second, to as great an extent as possible, from Naval terminology" (6, p. 63).

Need for Navy word list. Though the military services prepared word lists on a "scientific basis," no data on relative frequency of use of the words in military reading materials has been published. It would seem, then, that such a list would be of service to those interested in preparing instructional material, informative reading material, reading ability tests, or like material. In fact, such a list is essential. Even experienced textbook writers make the error of including many rare words and of excluding many common words, when they rely solely upon their experience as writers, or upon common sense.

Bongers has conclusively demonstrated that writers of elementary texts do need to use word lists. He compared word frequency of texts written with and without the aid of a word frequency list. It was shown that writers and teachers of experience will--without use of a list--choose many rare words and exclude many common words (1, p. 109-118).

<u>Materials included in tabulation</u>. The primary goal of literacy training in the Navy is that the men be literate in Navy communications. Therefore, it seems desirable to prepare a list of words required in reading the

most widely distributed publications used by Navy enlisted men. Four publications were found to be in this category: The Biuejackets' Manual (14), This is Your Navy (12), All Hands (2, 4), and Naval Training Bulletin (3, 5).

The Bluejackets' Manual is "a source of practical information for the seaman." It is the textbook for subjects required of the recruit and serves as a reference manual for the enlisted man throughout his Navy career.

This is Your Navy "is written for all enlisted men of the U.S. Navy." The Navy expects its enlisted men to know and thus take pride in the Navy's history. This Naval history is one of several means used in achieving this expectation.

All Hands is a Bureau of Naval Personnel information bulletin slanted toward the "average" sailor. It is published monthly "for the information and interest of the Naval service as a whole."

Naval Training Bulletin is another monthly publication of the Bureau of Naval Personnel. It serves primarily as resource material for local training offices.

These four reading materials were considered to represent the basic minimal reading requirements of enlisted men in the Navy. (It is assumed that the vocabulary derived from these four sources would include the vocabulary of such basic reading requirements as: signs,

watch orders, notices on the bulletin board, and the like.) Therefore, the vocabulary derived from analysis of these reading materials should be the minimal goal of literacy instruction in the Navy.

Method of tabulation. Pages were selected in the four reading sources by use of a table of random numbers. All words on the selected page were tabulated. Number of pages counted and proportion of total pages in the particular reading source are given in Table 1.

^{*}Two issues included: October, 1952 and November, 1952.

The absolute frequency of appearance of a word in any one source is simply a listing of the number of times the word occurs. This has meaning within any one word count but such a frequency cannot be compared directly with other counts. Comparability in the present study has been provided for by the use of frequency indices, e.g., number of times a word appears per 100,000 running words.

Table 2

Total Number of Words Counted

Source	No. Words

YN	45, 249	
AH	23, 793	
ТВ	28,414	
Total	121,931	

As word counts go, this is a small sample. Yet, it is believed to furnish an adequate general indication of relative frequency of words used in Naval writings. It is the first military word list to publish sources included, procedure of tabulation, and index of relative frequency of word

usage.

Definition of a word. One question the word counter must always answer is: What is a word? Various word counters have defined and tabulated words in different ways. Fries defines a word as "a combination of sounds acting as a stimulus to bring into attention the experience to which it has became attached by use" (7, p. 87). Palmer defines a word as "a given headword, together with its inflected forms and derivatives in all the senses in which it is used" (1, p. 76). Thorndike and Lorge list as one word "regular plurals, comparatives and superlatives, verb forms in s, d, ed, and ing, past participles formed by adding n. . . [but] Some adjectives in ing or ed and some nouns in ing are entered separately. . . .

Every occurrence is counted somewhere. No occurrence is counted twice" (13, p. ix).

In general, word counters have tabulated the lexical unit or the root form of words rather than separate inflections of words. This has the advantage of economy of tabulation, but leaves out certain information. In spelling, for example, it is the inflected forms, the changes in spelling with inflection, that cause spelling difficulty. It would seem advantageous, then, to know the relative frequency of use of the various inflections. Also, word counters are prone to make many exceptions—combining certain inflections, not combining others. Unless these exceptions are completely described, the research worker cannot recombine the data to compare it

with another word count using some other system of defining a word.

Considering all these factors it seems best to list separately all inflections. This follows the research principle that it is easier to combine small categories into larger categories than to try to guess at the smaller categories included in the larger category. Further, it gives data seldom reported—an index of frequency of use of inflections.

Operationally, the present word list defines a word as a group of letters not separated by space. (It is assumed they have meaning.) Thus, the various word forms--plurals, comparatives, contractions, participles, and the like--are listed as separate words. Hyphenated words are counted as one word. For example, "nine-year-old" is listed as one word, not as three words. Abbreviations or variant spellings are treated as separate words. For example, "Mr." is different from "Mister"; "though" is different from "tho." Possessives were the only exception to the above operational definition. The use of the possessive was not tabulated separately from the main word. Numbers, dates, single letters, dollar signs, and the like were tabulated but are not reported in the present list.

Two word lists. The first word list, beginning on page 13, includes the 503 most frequently used words. Only the total frequency index is reported. The second word list, beginning on page 21, includes all words with a frequency index of 2, or larger, in any one source. A frequency index for each source, The Bluejackets' Manual, This is Your Navy, All

Hands, and Naval Training Bulletin, and an average index are given. Any word with a frequency index of less than 2 was excluded from the list. The frequency index is based upon the number of times a word occurs per 100,000 running words.

Comparison with other word counts. The 503 most frequently used words (p. 13) were compared with two other word lists. Those words in the Navy word list that do not appear in the first 500 words of the Thorndike-Lorge word list (13), or whose root word does not appear in the Thorndike-Lorge word list, are indicated by an asterisk (*). Those words in the Navy word list that do not appear in the Basic Word List for Marines (11), or whose root word does not appear, are indicated by the number sign (#).

Comparison of the present word list with these other word lists dramatically illustrates the specialized nature of the Navy's vocabulary and the need for a Navy word list. Two hundred and six words of the 503 most frequent of the Navy list (41.0%) are not common with the 500 most frequent words of the Thorndike-Lorge list. (Several of these 206 words, however, (35.9%) are common to the next 500 words.) Three hundred and forty-two words of the 503 most frequently used words of the Navy list (68.0%) are not common to the Marine word list.

The discrepancy between the Navy and Marine word list is most likely due to the manner in which the Marine word list was prepared rather than to a true vocabulary difference between the two services. The Marine

"list of 637 words represents those Marine words most frequently used in the Guidebook For Marines . . . with some basic English words needed for their employment. . . . The remaining 459 Marine words, with a few exceptions, were selected for their high frequency" (11, p. 1). The Marine list gives no indication of individual word frequency, but it seems obvious from the above introduction to the list and from inspection of the word list itself that factors other than pure word frequency entered into compilation of the list.

Importance of first 503 words. One other analysis was performed. It was found that the 503 most frequently used words account for 63.5 percent of the total running words. This is in line with the findings of other word counters. Lorge claims, "in practically all counts, the five hundred commonest (most frequently occurring) lexical units account for more than 65% of all the words counted" (10, p. 549).

This list of the 503 most frequently used words, then, is of prime importance in the teaching of illiterates in the Navy. Once the literacy trainees have mastered this list they will know 63.5 percent of all the words encountered in the four reading materials analyzed. Further, assuming these materials to be representative of Navy writing in general, they will know the same percentage (63.5%) of all words encountered in the Navy.

Limitations and advantages. A frequency index of word usage does not give all the answers to the difficulty of a reading vocabulary. The

the frequency of the meanings of words. Homographs (words of the same spelling but of different origins, uses, or meanings) like lead, (to conduct) and lead (a metal), are counted together because of expediency of tabulation, even though they are really two different words. Further, we must be careful in our interpretation of statements of relatively few words accouting for a high percentage of the English language. Most of these words are the "function words" that express grammatical ideas of relationship, while carrying little meaning in themselves. We still need many words beyond these "function words" even though they do not appear with equal frequency.

Taking proper cognizance of these limitations, however, the present index of frequency of usage of words in Naval writing should aid literacy training instructors, makers of literacy tests, and writers of literacy instructional materials. It will tell the literacy instructor those words that are of more frequent use in Navy writings, with the implication that the more common words should be taught before words of infrequent usage are taught. The writer of instructional materials will know which words to include in his text or workbook, if he would have the man whose training employs that text be able to read other Navy materials. Similarly the person preparing a reading ability test can compare the words in his test with the present list to see whether his test represents the kinds of words

the men will be expected to read in the Navy. Nor need the value of the list stop with utilization in the literacy training program. It would be advantageous for all Navy writers to be informed regarding the frequency (or infrequency) of the use of certain words in widely distributed Navy publications.
